

Trucky.one

Trucky.one is a Software as a Service that helps transportation and agriculture companies manage their business.

It has the following modules:

- **Map** - live map that displays the location of every vehicle
- **Statistics** - various statistics about vehicles, drivers, maintenance and clients
- **Fleet** - Ability to add/edit/delete vehicles and trailers
- **Drivers** - Ability to add/edit/delete drivers
- **Routes** - Ability to add/edit/delete routes with multiple stops and a visual map displaying the route including the distance and all taxes associated with the route. Ability to add multiple orders to the route as well.
- **Orders** - Ability to add/edit/delete orders which are associated to a specific route.
- **Maintenance** - Ability to add/edit/delete maintenances of a vehicle with an option to notify the user if a maintenance needs an action
- **Clients** - Ability to add/edit/delete clients
- **Documents** - list of all documents added in different part of the app. Documents can be added for vehicles, drivers, orders, maintenance and clients.
- **Settings** - this section has a variety of options that the user can set, such as language, theme, currency, units and sounds. Here the user enters his payment details and receives his monthly invoices.

All modules have the ability to be filtered by search keywords.
Some modules have the ability to be filtered by groups.

The app currently has two supported languages - English and Bulgarian, but the structure allows adding new languages with ease.
